

Source Code of the Deployment of Spring boot application

As mainly uses commands

So, steps are as follows:

1. Create an EC2 instance
2. Connect to EC2 instance
3. Install java – sudo yum install java-17
4. In local terminal use command `mvn clean install` to get war file
5. Using WinSCP upload that war file in the ec2-user
6. Now run as java application that file
